PROFILE SUMMARY

I'm **Gowri U S**, a dedicated and performance-oriented Flutter Developer with **2 years of professional experience** in building **production-ready, scalable, and user-focused mobile applications** for both **Android and iOS**. I have successfully developed and deployed complete applications from scratch to production, with strong expertise across the full mobile app development lifecycle. My experience includes integrating Firebase services such as OTP authentication, push notifications, and real-time data handling, writing clean and optimized Dart code, and collaborating closely with backend teams on **microservices-based architectures and API integrations**. I've actively contributed to commercial delivery and business management applications, ensuring smooth UI/UX, reliable performance, and seamless backend connectivity.

SKILLS

• Flutter • Dart • Riverpod • Provider • React • Firebase • JavaScript • Firebase Console • GitHub
• Rest APIs • Microservice Architecture • iOS Deployment • Android Studio • Mappls Map • Visual Studio Code
• Postman • Payment-Gateway • Communication Skills • Node js

EXPERIENCE

My Famto Pvt Ltd, Software Developer

06/2024 to Present

I successfully completed a three-month internship, after which I was offered a full-time role based on my performance and technical contributions. Over the past **2 years of hands-on experience**, I have designed, developed, and deployed **production-ready Flutter applications for Android and iOS**, working on scalable mobile products from planning to release. My responsibilities include building robust UI components, integrating APIs, Firebase services, real-time socket communication, location tracking, and collaborating with backend teams working with **microservices architecture**. I've contributed to key business and delivery platforms, focusing on performance optimization, clean architecture, and delivering reliable user experiences.

EDUCATION

Jun 2021 - Apr 2024 Bachelor's Degree in Computer Application, University Institute of Technology - Distinction
Jun 2019 - May 2021 Grade XII, Govt Girls Higher Secondary School, Pattom, Thiruvananthapuram - 95.25 %
Jun 2018 - May 2019 Grade X, Govt Girls Higher Secondary School, Cottonhill, Thiruvananthapuram - 87%

PROJECTS

Delivery Partner App using Flutter

Overview: Developed an internal mobile application for delivery agents in my experience. The app allows agents to manage, track, and complete assigned delivery orders efficiently with real-time capabilities.

Key Features:

- * **OTP Authentication:** Integrated Firebase-based OTP verification for secure agent login.
- * **Order Management:** Enabled agents to view, accept, and update the status of delivery orders.
- * **Real-Time Notifications:** Implemented push notifications for new order assignments and updates.
- * **Location Tracking:** Used geolocation to confirm delivery addresses and assist with route planning.
- * **Delivery Status Updates:** Allowed agents to update order progress (picked up, delivered, etc.) in real-time.

Delivery App using Flutter

Overview: Designed and developed a delivery application using Flutter and Dart for Android and iOS, providing a seamless and intuitive user experience. Users can order anything and get real-time updates easily.

Key Features:

- * **Order Management:** Allowed users to place orders for items from various locations or specific vendors.
- * **Real-Time Tracking:** Implemented tracking features enabling users to monitor the status and location of their orders.
- * **Product Details:** Provided comprehensive details about products, including pricing and availability.
- * **Location Updates:** Enabled users to update their delivery address dynamically for greater flexibility.
- * **Performance Optimization:** Implemented efficient state management and data fetching.

Order and Inventory Management App using Flutter

Overview: Developed an intuitive and comprehensive application for businesses to manage orders, inventory, and promotions efficiently. Designed to streamline day-to-day operations for restaurants, retail stores, and delivery services.

Key Features:

- * **Order Management:** Enabled businesses to receive, accept, and process orders in real-time with instant notifications and order tracking from acceptance to delivery.
- * **User-Friendly Interface:** Designed a simple and intuitive UI with multi-user support and customizable permissions to cater to diverse business roles.
- * **Notifications Alerts:** Provided real-time alerts for new orders, low stock levels, completed deliveries, and reminders for order fulfillment.
- * **Performance Analytics:** Included analytics to track sales trends, top-selling products, and promotion success for data-driven decision-making.

Admin Panel Web Application using React

Overview: During my internship at My Famto Private Limited, I developed a comprehensive admin panel web application that enables efficient management of orders, merchants, products, and profit statistics. This application is a crucial component of a delivery service, facilitating operations for both admins and merchants.

Key Features:

- * Order Management: Track and manage orders with real-time updates.
- * Product Management: Add, update, and remove products easily.
- * Profit Statistics: Visualize profits and other metrics through intuitive dashboards.
- * Role-Based Access: Separate interfaces and access levels for admins and merchants.
- * Responsive Design: Utilized Tailwind CSS for a responsive, mobile-first design.

Interactive Landing Page using JavaScript

Overview: During my internship at My Famto Private Limited, I developed a dynamic landing page using React and Framer

Motion, showcasing modern web design and creating an engaging user experience.

Key Features:

- * Smooth Animations: Framer Motion for page transitions and hover effects.
- * Responsive Design: Full responsiveness for various devices.
- * Modular Components: Reusable components for maintainability.
- * State Management: useState and useEffect hooks.
- * Scoped Styling: CSS Modules and Styled Components.
- * Performance Optimization: Lazy loading and code splitting.

ScholarHub

Overview: ScholarHub emerges as a dynamic web application tailored to the needs of college campuses, facilitating seamless knowledge sharing and interaction among students and faculty members.

Key Features:

- * Knowledge Sharing: Enables students and faculty to share resources and information easily.
- * User Interaction: Facilitates interaction through forums, messaging, and collaborative tools.
- * Secure Access: Implements robust authentication and authorization mechanisms.
- * Scalable Architecture: Designed to handle growing user bases and increasing data volumes.
